QUERCUS

SERVICE BRIEF

Microsoft Azure

Leverage a cloud solution from a trusted developer like Microsoft

Azure may be the cloud your organization needs.

Tackle your business' biggest challenges with the right tools and services.

With the cloud virtually exploding in popularity, businesses may find it difficult to identify which cloud can best fulfill their needs. In light of this, why not turn to the one provided by one of the most trusted names in the industry?

Quercus IT is proud to offer Microsoft Azure as the solution to resolve your cloud needs. By adopting this dedicated cloud computing platform into an IT implementation, a business gains access to a variety of options like application deployment, analytics, data sharing and more—all with the scalability that a flexible business requires.

Leveraging Azure can take many shapes.

Microsoft's cloud can cover any of many assorted business needs in any industry.

Microsoft Azure is compatible with a variety of operating systems, programming languages, and frameworks. This means that it is likely to be compatible with the solutions you are already using, and can be easily integrated with your current business strategy to supplement it.

Regardless of the size of your operation, Microsoft Azure can be scaled to fit your needs, and can be applied to a business in any industry vertical. There are a great many business needs that Azure can see to fulfilling, some suited to all business sizes, while others are better suited to enterprise environments.

Compliance and Security Through Azure

Azure can help protect your operations from threats.

Of course, security is always a key concern for a business, and the mention of the cloud only heightens these concerns. Microsoft is concerned about security as well, so they have equipped Azure with baked-in security measures.

Furthermore, we can help you to augment these measures with secondary security solutions to further reinforce your business against threats.

Applications

Azure is capable of being leveraged to accomplish many needs:

IoT Data - If your business leverages the Internet of Things in its operations, Microsoft Azure can manage the data that it generates, allowing you to better decipher and leverage the insights it provides.

Infrastructure Monitoring - Your Azure solution can keep tabs on the others that your business leverages, including your applications and the infrastructure itself, giving you a look at their health and performance.

Backup and Disaster Recovery - Azure is capable of hosting your business backups and applications, protecting them from disaster and allowing you to leverage them remotely.

Business Intelligence - Much like it does for the IoT, Azure can also analyze all data and deliver insights to assist your decision making process.
